INSTALLATION INSTRUCTIONS

PART NUMBER WR 525 : WORX RACE SPONSONS KAWASAKI STX R 1200

IMPORTANT: READ ALL INSTRUCTIONS BEFORE PROCEEDING WITH INSTALLATION

Tool necessary for installation:

5mm Allen Key
Large Phillips (Star Screwdriver)
1x Tube of clear silicone
1x Tube of Red Loctite

Parts Supplied :

2 x **Worx** adjustable sponsons
2 x Side rails
6 x 1/4" x 1" Round head bolts
14 x 6mm x 25mm Round Head Bolts
6 x 1/4" x 3/4" Flat washers
14 x 1/4" x 5/8" Flat washers

1. Using the Allen key remove the stock sponsons and backing rails. Clean all of the old silicone from around the mounting holes.
2. Apply a bead of silicone around the edges of the side rails, and around each of the mounting holes (seven on each side).
3. Fit the side rails to both sides of the boat (shaped end forward) using the 14 x 6mm x 25mm bolts and the 5/8" flat washers supplied
4. The fitting of the sponsons is fully adjustable along the full length of the backing rail. The down position (top holes) is the most aggressive. Generally the forward position is better for smooth water and the rear position for rough water, it is really a choice thing and you will need to find the best position for your style of riding, closed course, endurance and rider weight.
5. After riding for about 15 minutes check that your sponson bolts are tight and when you have decided which position best suits your riding style it is recommended that you apply red loctite to the mounting bolts. **Regularly check that the sponson fixing bolts are tight.**
